DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 rejected under 35 U.S.C. 103(a) as being unpatentable over Hiji et al. (U.S. 5,953,089) in further view of Ouderkirk et al. (U.S. 5,825,543). Hiji et al. discloses a reflective liquid crystal display with light diffusing layer 30. This light-diffusing layer comprises a liquid crystalline polymer. See figure 1. Note the chemical formula of the liquid crystal polymer in column 4, line 55. The dimensions of the dispersed liquid crystal polymer particles are result effective variables, the determination of which has been judicially deemed as obvious to those of ordinary skill in the art. Although Hiji et al. does not disclose the difference in refractive index between the continuous regions and the polymer dispersed regions, Ouderkirk et al. discloses an optical film where the index of refraction of continuous and disperse phases are substantially matched along a first orthogonal axis and substantially mismatched along a second orthogonal axis. The indices of the two regions differ by no more than 0.03 in the matched regions and differ by at least 0.07 in the mismatched regions. This type of scheme provides a high degree of control in providing optical bodies of consistent and

predictable high quality performance. See column 7, lines 30 – 37. Therefore, it would have been obvious for one of ordinary skill to use the scheme taught by Ouderkirk et al. in the diffusing layer of Hiji et al. because of the aforementioned benefits.
